

JAMES BRICE ARDA

AI Automation Specialist | AI Agents · RAG Systems · Workflow Automation
Cebu, Philippines · 0945-278-5036 · 19jboifox68@gmail.com · [linkedin.com/in/jbarda](https://www.linkedin.com/in/jbarda) · jbrice.online

AI Automation Specialist with 8+ years of background in customer operations, now specializing in end-to-end workflow automation across sales, ops, and client delivery stacks. Builds production-grade automations using n8n, Make.com, and Zapier — including multi-branch AI agents, RAG pipelines, CRM stage routing, and cross-platform API integrations. Experienced in webhook design, conditional logic, JavaScript code nodes, and error handling patterns.

CORE SKILLS

n8n · Make.com · Zapier · Webhook Design · API Integration · JavaScript (Code Nodes) · OpenAI / OpenRouter · Supabase Vector Store · RAG Pipelines · CRM Automation (Asana, Airtable) · Google Workspace · Airtable · Slack · Apollo.io · Xero · Prompt Engineering · Conditional Logic & Error Handling

FEATURED AUTOMATION PROJECTS

AI Appointment Setter · n8n · Google Calendar · GetSlots API · JavaScript · Webhook

Built a production multi-branch appointment scheduling system handling booking, rescheduling, cancellation, and call-routing flows across 40+ nodes. Implemented JavaScript code nodes for timezone conversion (CST to GMT+8), slot validation, and structured error responses. Integrated Google Calendar for real-time availability checks and webhook callbacks to external CRM. Reduced manual scheduling coordination to zero.

AI Lead Qualification & Routing System · n8n · OpenAI · Airtable · Slack · Gmail

Designed an end-to-end lead qualification pipeline triggered by form submission: data cleaning, AI scoring (Hot / Warm / Cold) via OpenAI chat model, conditional routing with JavaScript logic, Slack real-time alerts per tier, Airtable logging, and automated follow-up emails. Eliminated manual lead review; enabled same-minute routing of high-priority leads to sales.

RAG Knowledge Base Agent (Facebook Page) · n8n · OpenRouter · Supabase Vector Store · Google Gemini Embeddings · Meta Webhooks

Architected a retrieval-augmented generation (RAG) pipeline syncing Google Drive documents to Supabase vector store via Gemini embeddings on file create/update/delete events. Deployed an AI Agent on Facebook Page with conversation memory (Simple Memory) and an HTTP response node for real-time Messenger replies. Knowledge base stays current automatically; agent handles inbound inquiries 24/7 without manual intervention.

PROFESSIONAL EXPERIENCE

AI Automation Specialist (Freelance) | Self-Employed

Jan 2026 – Present

- Design and deploy multi-step automation workflows across n8n, Make.com, and Zapier for clients in sales ops, content, and customer support
- Build webhook-triggered pipelines integrating CRMs, Google Workspace, Slack, and AI APIs (OpenAI, OpenRouter, Gemini)
- Implement JavaScript code nodes for data transformation, error handling, and conditional routing logic
- Built and deployed 10+ automation workflows across n8n, Make.com, and Zapier as portfolio projects spanning sales ops, content pipelines, and customer support use cases

Senior Project Expert | Cognizant

Jul 2020 – Jan 2026

- Managed complex client account operations; identified repetitive manual workflows and built internal process documentation to support future automation
- Gained deep exposure to CRM workflows, ticket routing logic, and SLA-driven escalation patterns — directly informing current automation design work

Engagement Specialist | Synchrony Financial

Apr 2019 – Oct 2019

- Handled billing inquiries and account issue resolution; recognized patterns in manual back-office processes ripe for automation

Earlier Roles | Contact Solutions · Collabera · Wipro

Oct 2015 – Feb 2019

- Customer service and lead generation across inbound and outbound programs; built strong communication and process documentation skills

EDUCATION

Associate in Computer Technology · Asian College of Technology, Cebu · 2013–2015

Languages: English (professional) · Tagalog · Bisaya
